- <https://github.com/hasanxon007>
- Tashkent, Uzbekistan

SUMMARY

Computer Engineering student with hands-on experience in .NET backend development. Proficient in C#, ASP.NET Core, and Entity Framework Core with solid understanding of layered architecture and SOLID principles. Developed a production-ready CRM system currently used by real educational centers. Strong foundation in database design, RESTful API development, and role-based access control, with experience building scalable and maintainable backend systems.

EDUCATION

Turin Polytechnic University in Tashkent

September, 2025 - present

- Studying Python programming, algorithms, and data structures
- Learning core computer engineering and mathematical foundations
- Gaining experience with command-line tools and Unix-based environments
- Developing strong analytical and problem-solving skills

Najot Ta'lim IT Academy

November, 2024 - March, 2025

- Completed a Computer Science foundation program focused on programming fundamentals
- Worked with Python and C to understand core programming concepts and memory usage
- Studied algorithms and data structures for problem-solving
- Learned relational databases and SQL, including queries and basic data modeling

EPAM .NET Development

January, 2026 - May, 2026

- Specialized in C# and .NET backend development
- Built backend applications using ASP.NET Core and Entity Framework Core
- Applied OOP principles, design patterns, and layered architecture
- Implemented asynchronous programming, logging, and error handling
- Worked with database design and Entity Framework Core ORM
- Developed and maintained RESTful APIs for backend services

SKILLS

TECHNICAL:

- **Professional:** C#, .NET, Git, GitHub, EF Core, SQL, N-Tier / Layered Architecture, SOLID, DRY, KISS
- **Intermediate:** Python, HTTP, MySQL, HTTP/HTTPS protocol and request lifecycle, Structured logging (Serilog) and log analysis with Seq
- **Basic:** HTML, CSS, ASP.NET MVC

SOFT:

- Problem-solving and analytical thinking
- Teamwork and collaboration
- Creativity and continuous learning

LANGUAGES

- **Uzbek:** Native
- **English:** Full working proficiency (IELTS 7)
- **Russian:** Intermediate

PROJECTS

Tizeem POS — Point of Sale System

- Contributed as a Backend Developer using .NET, designing entity models and implementing business logic to support core POS functionalities such as inventory management, transactions, and customer operations.
- Developed and improved RESTful APIs to enable reliable communication between the frontend (Next.js/React) and backend services, ensuring efficient data processing and system performance.
- Implemented logging, validation, and error handling mechanisms, improving system reliability, maintainability, and debugging while collaborating with the team to enhance development productivity.

Taleem — Education CRM Platform

- Designed and implemented a comprehensive education-center management system allowing centers to register, manage employees, upload courses, and oversee student enrollment and progress.
- Developed and refined domain models and database schema, applying best practices in relational design to support scalable, role-based access control.
- Implemented role and permission management services (EmployerRole) to securely manage staff responsibilities across the platform.
- Improved core business logic by introducing modular service layers, enhancing code readability, testability, and long-term maintainability.
- Integrated structured logging and error handling using Serilog, improving monitoring, debugging efficiency, and reducing incident resolution time.
